

PART 1: HARDWARE CONNECTIONS (VERY IMPORTANT)

1 DHT22 → ESP32

You already debugged DHT well, so we'll use **known-safe** pins.

DHT22 pins (3-pin module)

diff

Copy code

+ DATA -

Connections

DHT22	ESP32
+	5V
DATA	GPIO 27
-	GND

3 Wiring to ESP32 (DO THIS EXACTLY)

We'll use GPIO 4 (safe, tested, reliable).

Connections

DS18B20 wire	ESP32
 Red	3.3V
 Black	GND
 Yellow	GPIO 4

✓ Correct DS18B20 wiring (DATA + pull-up)

The pull-up resistor goes between DATA and 3.3V, not between DATA and GPIO.

Here's the exact, correct connection:

java

 Copy code

```
DS18B20 S (DATA) ————— GPIO 4
      |
      └─ 4.7kΩ — 3.3V
```

And the rest:

nginx

 Copy code

```
DS18B20 - (GND) ————— GND
DS18B20 V / + ————— 3.3V
```

Potentiometer

Pot	ESP32	
Side	3.3V	
Middle	GPIO 34	
Side	GND
